

AMENDMENTS TO THE CLAIMS

1. (**Currently amended**) A delivery system for a medicament or well-being enhancing composition, comprising a ~~flexible member pocket~~, a system means for attaching the flexible member to fabric to form a pocket to a surface, and an absorbent pad for impregnation with the medicament or well-being enhancing composition, ~~arranged such that when the flexible member is attached to a piece of fabric a pocket is formed shaped and sized such the pad may be received and held securely within the pocket but is removable therefrom wherein the pocket includes an opening and is formed, shaped, and sized such the absorbent pad may be received and held securely within the pocket but is removable therefrom via the opening, said pocket comprising a single piece construction from a flexible member folded over itself to define first and second layers, said first and second layers being attached to each other along part of their peripheries and unattached along other parts of their peripheries, said unattached parts providing the opening for receiving and removing the absorbent member, wherein the first layer includes an extended part that extends beyond the second layer adjacent the opening, and wherein the first layer is folded such that the extended part and the second layer overlap, wherein the extended part of the first layer is fixed to the pocket along its side edges whereby the extended part of the first layer provides a closure member for retaining the absorbent pad within the pocket, and wherein the flexible member comprises a material that is arranged to prevent the medicament or well being enhancing composition from passing through its structure to the skin but enables an inhalable vapor to be released therethrough.~~

2. (**Currently amended**) A delivery system according to claim 1, in which the ~~flexible member system for attaching the pocket to a surface~~ comprises an iron on adhesive on one surface of the flexible member, the flexible member being positioned by the user on a the fabric surface and then ironed into place to secure it.

3. (Canceled)

Appl. No. : 10/517,187
Filed : May 31, 2005

4. **(Currently amended)** A delivery system according to claim 1, ~~in which the flexible member comprises a sheet of material which forms the pocket with the fabric when attached in place wherein the extended part of the first layer is folded such that it lies between the non-extended part of the first layer and the second layer.~~

5. (Canceled)

6. **(Previously presented)** A delivery system according to claim 1, in which the pad is supplied impregnated with a medicament or well-being enhancing composition.

7. **(Previously presented)** A delivery system according to claim 1, in which the pad is supplied separately from a medicament or well-being enhancing composition for impregnation just before insertion into the pocket.

8. **(Currently amended)** A ~~medicament~~ delivery system according to claim 1, in which the medicament is a vaporized decongestant or an essential oil.

9. **(Currently amended)** A ~~medicament~~ delivery system according to claim 1, in which the medicament is a muscle relaxant.

10. **(Currently amended)** A ~~medicament~~ delivery system according to claim 1, in which the well-being enhancing composition comprises an insect repellent.

11. (Canceled)

12. **(Currently amended)** A ~~medicament~~ delivery system according to claim 1 in which the flexible member is decorative or carries advertising matter.

13. (Canceled)

14. **(Currently amended)** A ~~medicament~~ delivery system according to claim 1 in which the ~~means system~~ for attaching the flexible member to the surface comprises ~~any of the following: stitching; a self-adhesive.~~

15. **(Currently amended)** ~~Fabric comprising a~~ A pocket characterized in that the pocket is arranged to receive including an opening for receiving an absorbent pad that can be impregnated with a medicament or well-being enhancing composition and adhesive for attaching the pocket to a surface, the pocket being formed, shaped and sized such that the absorbent pad may be received and held securely within the pocket but is removable therefrom via the opening, wherein said pocket comprises a single piece construction from a flexible member folded over itself to define first and second layers, said first and second layers being attached to each other along part of their peripheries and unattached along other parts of their peripheries, said unattached parts providing the opening for receiving and removing the absorbent member, wherein the first layer includes an extended part that extends beyond the second layer adjacent the opening and the first layer is folded such that the extended part and the second layer overlap each other, wherein the extended part of the first layer is attached to the pocket along its side edges, whereby the extended part of the first layer provides a closure member for retaining the absorbent pad within the pocket, and wherein the flexible member comprises a material that is arranged to prevent the medicament or well being enhancing composition from passing through its structure to the skin but enables an inhalable vapor to be released therethrough.

16. **(Currently amended)** ~~Fabric A pocket according to claim 15, characterized in that the pocket comprises a closure means~~ wherein the extended part of the first layer is folded such that it lies between the non-extended part of the first layer and the second layer.

17. (Canceled)

18. **(Currently amended)** ~~A garment comprising a pocket characterized in that the pocket is arranged to receive an absorbent pad impregnated with delivery system for a medicament or well-being enhancing composition, the comprising a pocket, adhesive for attaching the pocket to the garment and an absorbent pad for impregnation with the medicament or well being enhancing composition, wherein the pocket includes an opening and is formed, being shaped and sized such that the absorbent pad may be received and held securely within the pocket but is removable therefrom via the opening, said pocket comprising a single piece construction from a flexible member folded over itself to define first and second layers, said first~~

Appl. No. : 10/517,187
Filed : May 31, 2005

and second layers being attached to each other along part of their peripheries and unattached along other parts of their peripheries, said unattached parts providing the opening for receiving and removing the absorbent member, wherein the first layer includes an extended part that extends beyond the second layer adjacent the opening and the first layer is folded such that the extended part of the first layer and the second layer overlap each other, wherein the extended part of the first layer is attached to the pocket along its side edges, the arrangement being such that the extended part of the first layer provides a closure member for retaining the absorbent pad within the pocket.

19. **(Currently amended)** A garment according to claim 18, characterized in that the ~~pocket comprises a closure means~~ wherein the extended part of the first layer is folded such that it lies between the non-extended part of the first layer and the second layer.

20. **(Currently amended)** A garment according to claim 18 in which the medicament or well-being enhancing composition is selected from the group consisting of any of the following: a vaporized decongestant, or an essential oil,[[;]] a muscle relaxant,[[;]] and an insect repellent; ~~a fragrance or a perfume.~~

21. **(Currently amended)** A kit comprising an adsorbent pad impregnated with a medicament or a well-being enhancing composition and a pocket for carrying the absorbent pad, said pocket comprising a system for attaching the pocket to a surface and an opening for receiving the absorbent pad, and being ~~flexible member together with means for attaching the flexible member to a fabric to form a pocket such that when the flexible member is attached to a fabric a pocket is formed, shaped and sized such that the absorbent pad may be received and held securely within the pocket but is removable therefrom via the opening, and a closure member for retaining the absorbent pad within the pocket, wherein the pocket comprises a material that is arranged to prevent the medicament or well being enhancing composition from passing through its structure to the skin but enables an inhalable vapor to be released therethrough.~~

22. **(Currently amended)** A kit according to claim 21 in which the medicament or well-being enhancing composition is selected from the group consisting of any of the following:

a vaporized decongestant, or an essential oil, a muscle relaxant, and an insect repellent; a fragrance or a perfume. .

23. (Currently amended) A ~~delivery system~~ kit according to claim [[4]] 21, ~~in~~ which wherein the pocket comprises ~~closure means~~ a single piece construction from a flexible member folded over itself to define first and second layers, said first and second layers being attached to each other at peripheral portions and unattached at other peripheral portions, said unattached peripheral portions providing the opening for receiving and removing the absorbent member, wherein the first layer extends beyond the second layer adjacent the opening and the first layer is folded such that it overlaps the second layer to provide the closure member for retaining the absorbent member within the pocket.

24. (New) A kit according to claim 23, wherein the closure member is attached to the pocket at side peripheral portions.

25. (New) A kit according to claim 23, wherein the extended part of the first layer is folded such that it lies between the non-extended part of the first layer and the second layer.

26. (New) A garment according to claim 18, wherein the flexible member comprises a material that is arranged to prevent the medicament or well being enhancing composition from passing through its structure to the skin but enables an inhalable vapor to be released there through.

27. (New) A kit comprising an adsorbent pad impregnated with a medicament or a well being enhancing composition and a flexible member together with means for attaching the flexible member to a surface to form a pocket such that when the flexible member is attached to a fabric a pocket is formed shaped and sized such that the pad may be received and held securely within the pocket but is removable therefrom, wherein the medicament or well-being enhancing composition is selected from the group consisting of a vaporized decongestant, an essential oil, a muscle relaxant and an insect repellent.
